

Chrome Extension- Web Activity Tracking

Hello everyone. We will be starting our project on building a Chrome Extension. We are trying to build an extension that will keep track on what domains you are going and what is the time that you are spending on each domain. Basically a web-time-tracker. So to start off the project, first learn how to build a "Hello World" program in chrome extension and see the official documentation of Chrome Extension.

[Chrome Extension Tutorial](#)

#1 Introduction

<https://developer.chrome.com/docs/extensions/reference/>

<https://github.com/GoogleChrome/chrome-extensions-samples>

Here are some introductory videos and documentations required to develop the extension. Make sure you first complete the YouTube tutorials and then look for "tabs", "storage", "permissions", "windows", "activeTabs" etc. in the API Reference link. Also, there are some samples given by Chrome.
